

Hoàng Công Thọ

15/01/2000

Ho Chi Minh, Tan Binh - Ho Chi Minh, Viet Nam

Middle Fullstack Developer

Portfolio: hoangcongtho-portfolio.vercel.app

Contact: thoqb123456@gmail.com | +8444495192

Results-driven Full-stack Developer with 3 years of experience building scalable web applications and high-performance user interfaces. Proficient in the JavaScript ecosystem, with deep expertise in NestJS, React, and Next.js for designing robust microservices and RESTful APIs. Proven track record of handling systems serving over 100,000+ active users with a strong focus on system scalability and clean code. Actively leverages AI-powered tools to accelerate development workflows, improve code quality, and deliver customer-centric solutions in fast-paced environments.

Education

Aug 2018 - Mar 2023

Duy Tan University

Bachelor's degree in Software Technology
GPA: 3.4/4

Language

Vietnamese — Native

English — TOEIC: 695

Skill

- Languages:** JavaScript (ES6+), TypeScript, Java, Python (Django).
- Frontend:** React.js, Next.js, Redux, Tailwind CSS, Flutter.
- Backend:** Node.js (NestJS, Express.js), Firebase Functions.
- Databases:** MongoDB, PostgreSQL, Supabase, MySQL.
- Tools & DevOps:** Git (Gitflow), Docker, Jenkins, Vercel, Jira, Bitbucket.

EXPERIENCE

HDWEBSOFT Mar 2025 - Present | Ho Chi Minh City

CBPO

Fullstack Developer

- **Description:** Developed and scaled a high-performance, multi-service e-commerce data orchestration and logistics management platform. The ecosystem consists of distributed microservices designed to centralize order processing, automate Amazon marketplace data ingestion (Velocity, BuyBox, and Competitor tracking), protect brand pricing integrity, and optimize shipping transit workflows.
- **Technologies:** Vue.js, Python (Django), PostgreSQL, MongoDB.
- **Key Contributions:**
 - **Architecture & Microservices:** Engineered and maintained a scalable microservices architecture leveraging **Python (Django)** for robust backend services and **Vue.js** for high-performance frontend applications, deployed and orchestrated on **Google Cloud Platform (GCP)**.
 - **Dual-Database Optimization:** Designed a hybrid data tier utilizing **PostgreSQL** for relational order transactions and ACID-compliant operational data, alongside **MongoDB** to handle high-velocity, unstructured marketplace metrics and big data analytics logs.
 - **AI-Accelerated Full-Stack Development:** Spearheaded full-stack feature delivery by strategically integrating advanced AI-assisted coding tools to accelerate development velocity, while applying deep engineering expertise to rigorously refine, debug, and enforce production-grade code quality.
 - **Large-Scale Database Migration (Atlas to Self-Hosted GCP):** Successfully planned and executed the seamless migration of multiple DB **1.5TB production MongoDB cluster** from MongoDB Atlas to a custom, self-hosted environment on **GCP**. Designed a zero-downtime replication and parallelized restoration pipeline using Docker Compose, reducing third-party licensing dependencies.

CA2T - Learning Management System

Team Lead | Fullstack Developer

- **Description:** A comprehensive learning platform designed for corporate training, featuring multi-role access (Admin, Learner).
- **Technologies:** React.js, Python (Django), PostgreSQL, Tailwind CSS, BMAD AI framework.
- **Key Contributions:**
 - **Designed a dynamic Role-Based Access Control (RBAC) system**, providing customized dashboards and tailored learning interfaces for diverse user personas including Admin and Learners.
 - **Orchestrated full-stack development using Python and ReactJS**, strategically leveraging AI tools to accelerate coding while applying 3 years of professional expertise to refine, debug, and ensure production-grade code quality.
 - **Directed a cross-functional team of 5 members**, overseeing project timelines and technical alignment to deliver a high-performance internal training platform.
 - **Optimized UI components for high interactivity** and seamless user experience by integrating **ReactJS** with **Tailwind CSS**, focusing on performance and usability for internal employees.

TheAvoTree - E-commerce Ecosystem

Backend Developer

- **Description:** A large-scale e-commerce platform bridging WordPress/WooCommerce with a modern JavaScript-based management system.
- **Technologies:** NestJS, React.js, MongoDB, WordPress (Woo-commerce Webhooks System).
- **Key Contributions:**

- Architected a **high-performance MongoDB schema** that mirrors the complex WooCommerce data structure, ensuring data consistency across platforms.
- Engineered a **centralized Admin Dashboard** that visualizes real-time sales metrics, user behavior analytics, and content performance using Chart.js.
- Established a secure **Webhook listener** architecture to handle thousands of real-time events (orders, inventory updates) with zero data loss.
- Enhanced system reliability by writing unit and integration tests for core business logic.

SingleKey - Property Management Solution

Fullstack Developer

- **Description:** A comprehensive residential leasing platform that simplifies the process for landlords and tenants.
- **Technologies:** Next.js, Python (Django), VWO (A/B Testing), Tailwind CSS.
- **Key Contributions:**
 - Engineered high-conversion landing pages and complex application workflows using **Next.js** and **TypeScript**, focusing on accessibility and speed.
 - Implemented and managed **A/B Testing experiments via VWO**, analyzing user behavior data to iterate on UI components, resulting in a measurable increase in user sign-ups.
 - Developed modular, reusable React components with **Tailwind CSS**, reducing development time for new features by 30%.
 - Collaborated closely with Product Managers to translate business requirements into technical specifications, ensuring pixel-perfect implementation of designs.

SUZU GROUP Mar 2024 - Mar 2025 | Ho Chi Minh City

Suzu.net - Community Social Network

Fullstack Developer

- **Technologies:** Next Js, Supabase (PostgreSQL), WebSockets, Vercel.
- **Key Contributions:**
 - Integrated **Supabase Realtime** to power instant messaging and live notifications, reducing latency by 40%.
 - Developed a "Smart Feed" algorithm using PostgreSQL functions to prioritize content based on user engagement.
 - Implemented **Lazy Loading** and **Image Optimization** strategies, improving the Core Web Vitals score from "Needs Improvement" to "Good".
 - Collaborated with the DevOps team to set up **CI/CD pipelines** on Vercel, streamlining the deployment process.

INMOBIVN Dec 2022 - Mar 2024 | Dong Hoi City

iKara Admin CMS — Management & Economy System

FullStack Developer

Technologies: Java, React.js, Jenkin.

- **Key Contributions:**
 - **Developed a comprehensive CMS** using **Java Servlet** and **React** to manage and analyze data for **10,000+**
 - **Engineered the Virtual Store & Item Management module**, allowing administrators to create, categorize, and update in-app items and store configurations dynamically.
 - **Designed data entry and validation workflows** to ensure 100% integrity when updating mission-critical data such as item prices, exchange rates, and inventory.
 - **Built internal reporting tools** to track and analyze user consumption of virtual currency, helping the business team optimize store performance.

- **Maintained seamless synchronization** between the Java-based backend and mobile clients (Android/iOS) via **RESTful APIs**, ensuring real-time updates for store items.

Yokara - Social Music & Karaoke Platform

FullStack Developer

- **Technologies:** Java, Node.js (Express), Firebase, Flutter, Swift.
- **Key Contributions:**
 - Developed and optimized **RESTful APIs** using Express.js and Firebase Functions to ensure high availability and low latency for real-time interactions.
 - Integrated **Secure Authentication** systems utilizing JWT and Firebase Auth, enhancing user data protection.
 - Designed and implemented the backend architecture for a **virtual currency system** and in-app transactions, ensuring 100% accuracy in financial records.
 - Optimized database structures for the "Sicbo" mini-game integration, handling high-frequency concurrent data updates.
 - Collaborated with the mobile team (Flutter/Swift) to ensure feature parity and seamless UI/UX across all platforms.
